# 1Import your original video

Import the video you want to Filmora9 by clicking the "Import" button on the top-left corner or directly drag it from the computer to User's Album. Then drag the added video from the User's Album to the video track of timeline.

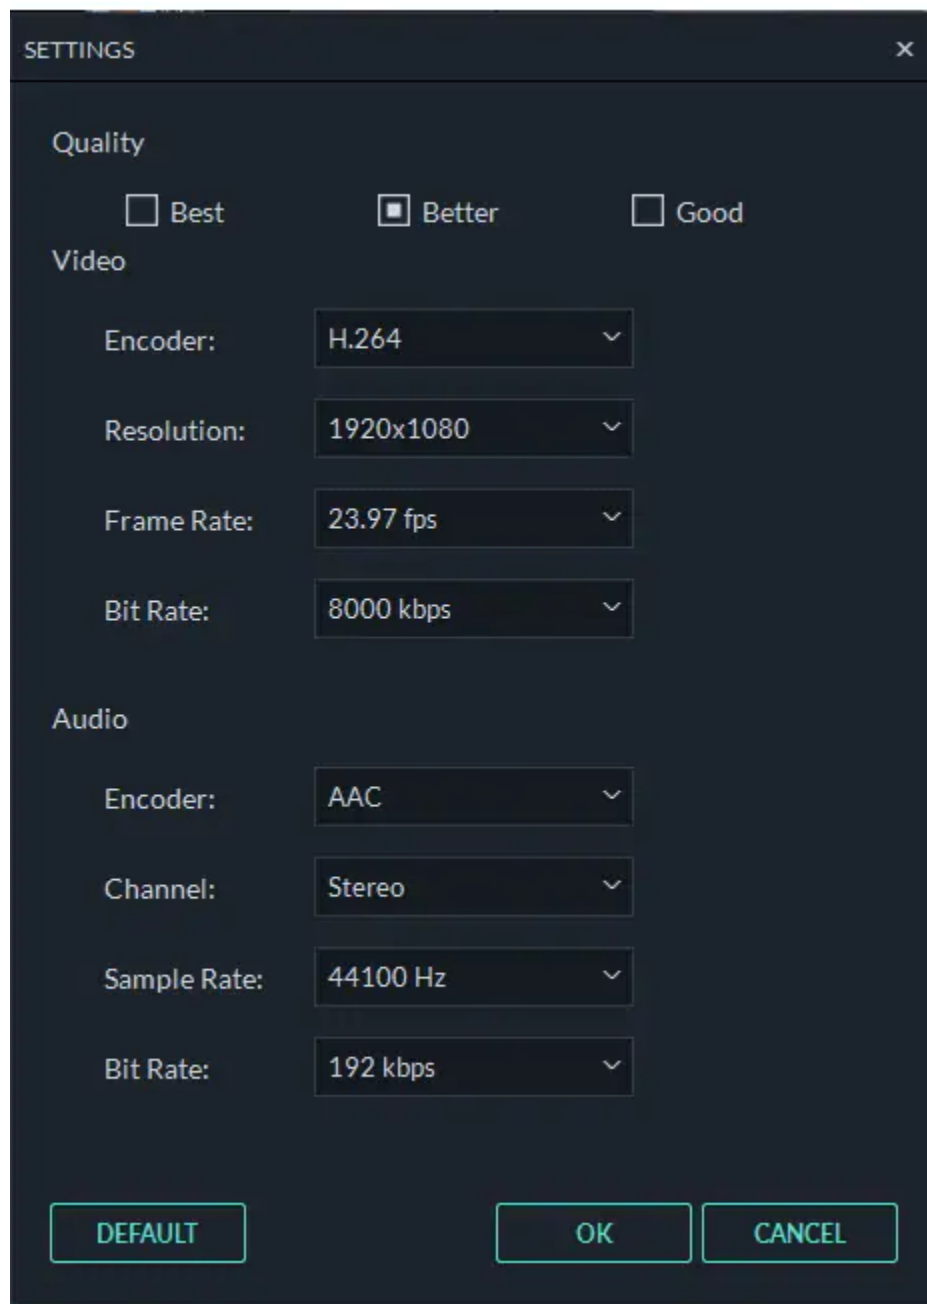

2 Shrink your file with ease

Click the "Export" button to open the output window of this video shrinker.

Go to the Format tab and then keep its original video format as the output. Next, click the triangle button below to shrink video in the "Settings" panel by choosing a lower video resolution, frame Rate or bit rate.

If the video format is not your concern, you can also select other formats like FLV, MP4, etc. which usually create smaller size file.

3 Export the shrunk file

Now hit the Export icon to render a much smaller file you want. When it finishes, click "Find target" to get the compressed file, and then you may share it with your friends with no limit.

Learn more about how to export.

Tips: (Optional) If necessary, you can cut down video length by removing some unnecessary segments. Click the video on the Timeline, drag the top of the red playhead to any position of the video, click scissor-like button to cut it. Repeat the step to cut the video
